Introduction

Al-Diyar Al-Bayda Company was incorporated under Commercial Registration No. (4031054052) And our activities are specific within the sectors of reinforced concrete of all kinds, specializing in the work of mountain avalanches and concrete spray, and the support of the sides and reinforcement since the establishment of 2008 AD, we are working to be one of the leading companies in the field of contracting. And a staff that has outstanding qualification and

Mission of the Company

Partners and clients view us as an integral part of their success process. We have the experience, skills and resources to meet the challenging conditions of contracting business with a commitment to deliver on time. Therefore, we anticipate their needs and society will consider us worthy of responsibility and speed of response. We also have a history of careful planning and management.

Vsion of the Company

Reaching the highest levels of success by providing high quality services that exceed the expectations of our customers, making us their best choice.

Owner of Company
ENG. Abed Al-saadi

Whenever I remember how we started, how we developed and where we stand now, I feel proud of all the successes we have achieved. At the time when this company was established in 2008, we had a simple experience, learning and aspiring to reach a prominent position, and although we started from nothing, we managed to do With great achievements, in the past, the name of Al-Diyar Al-Bayda was not known to anyone and it was even strange to us, but now all the employees, including me, are proud when we declare that we belong to the Al-Diyar Al-Bayda Contracting Company that we can do anything in the field of contracting after the success of God After we made a great effort and after overcoming many challenges, we realized an important fact about ourselves, which is "We can do any project only if we really want to achieve something and during the years I spent in the field of contracting I learned that great organizations are based on great people, so I am honored To work with the team of Diyar Al-Bayda Contracting Company hand in hand, without which we would not have reached what we are and now I will not tell you about the efficiency and ability of the team I lead, but I am confident that I have one of the best working teams in the Middle East in terms of professionalism and education And the ability to take responsibility, and now, after implementing hundreds of successful projects in various fields, I can only thank our customers, partners, and everyone who put their trust in us in managing their business. I want to share with you the secret of our success, which is the success of God Almighty and then "working through sound scientific knowledge

General contracting works for implementation

Concrete spray to protect against falling

Consolidation and treatment of mountain

Support the sides for the excavations

Rock cutting and excavation work

sewage works

Reinforcement with rock bolts

Reinforcement with metal mesh

Rhubarb stone

Executing the protection with rock bolts

Executing the protection work by galvanized wire mesh

Executing the protection work by shotcrete

Stabilizing slope by rip rap

Stabilizing excavations by gabion boxes and meters gabion

Shoring

General contracting works, building contracts implementation and maintenance

And since we are classified with the Ministry of Municipal and Rural Affairs, which qualifies us to implement projects in this field and implement buildings and maintenance

Reinforcement with metal mesh

Implementation of the concrete sprinkler and the metal mesh for all sides of the rocky piece after the completion of the consolidation work. The metal mesh is installed according to the approved specifications, provided that the thickness of the concrete sprinkler is not less than 10 cm

Rhubarb

Supporting mountains and earthworks, as well as drainage of rainwater by cutting rocks of varying sizes (20-70 cm) as required by the consultant, and fixing the spaces by grouting cement (cement lining) and taking into account that the surface is equal on .all facades of the rap

sewage works

Construction of concrete box ferries to drain rain and flood waters
And also the construction of ferries using concrete or plastic pipe lines

Reinforcement with rock bolts

In coordination with the competent authorities, the locations of the rock anchors of the mechanical type are selected and distributed according to the nature of the rocks of the region and their need for such type, provided that it is

Strengthening and treatment of mountain avalanches

Coordination is made with the competent authorities and the specialized consultant, and the locations of the rock anchors of the mechanical type are chosen and distributed according to the nature of the region's rocks and their need for such type, provided that the diameter of the skewer is 25 to 32 mm and its lengths range from 3 m to 12 m longitudinal according to the geological study.

Support the sides for the excavations

It is a kind of deep foundation. It is used when foundational work is not possible in the normal way and is divided into two types
Ground Piles: They transfer pressure or weight through the soft soil until it reaches a solid layer.

Side Piles: - They are used to support the sides or the shafts in the case of excavation
The type of work is determined based on the reports of the geologist or the competent consultant.

Concrete sprinkler to protect against rockfall

We specialize in the treatment of mountain avalanches and rock stabilization by concrete (sprayed concrete) as well as concrete sprinklers on the sides of excavations for the safety of the site from collapse

Rock cutting and excavation work

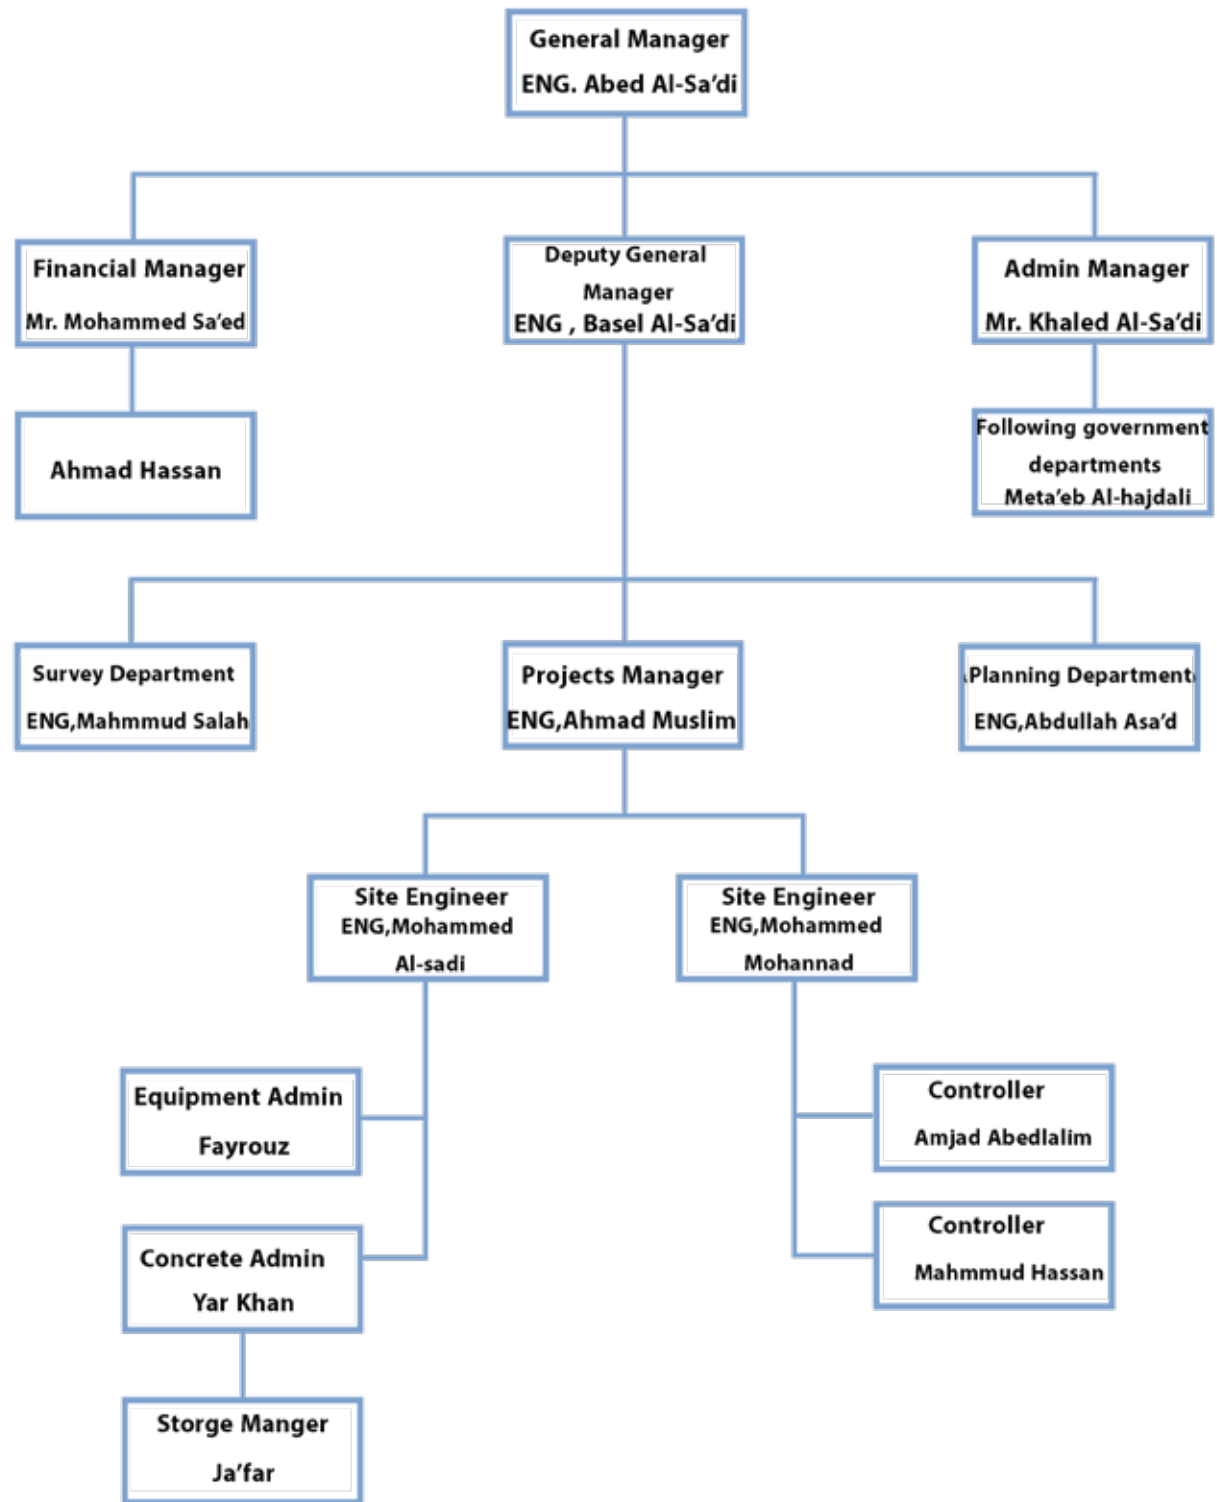

As we specialize in excavation work
And rock cuttings of all kinds

We have sufficient equipment for such work

And we have enough experience
To carry out government projects like this
