Ductmate Flange - HVAC Ducts

Strong and virtually leak-free rectangular duct connection systems. Ductmate connection systems consist of roll-formed flanges, corner pieces, gasket, and cleat.

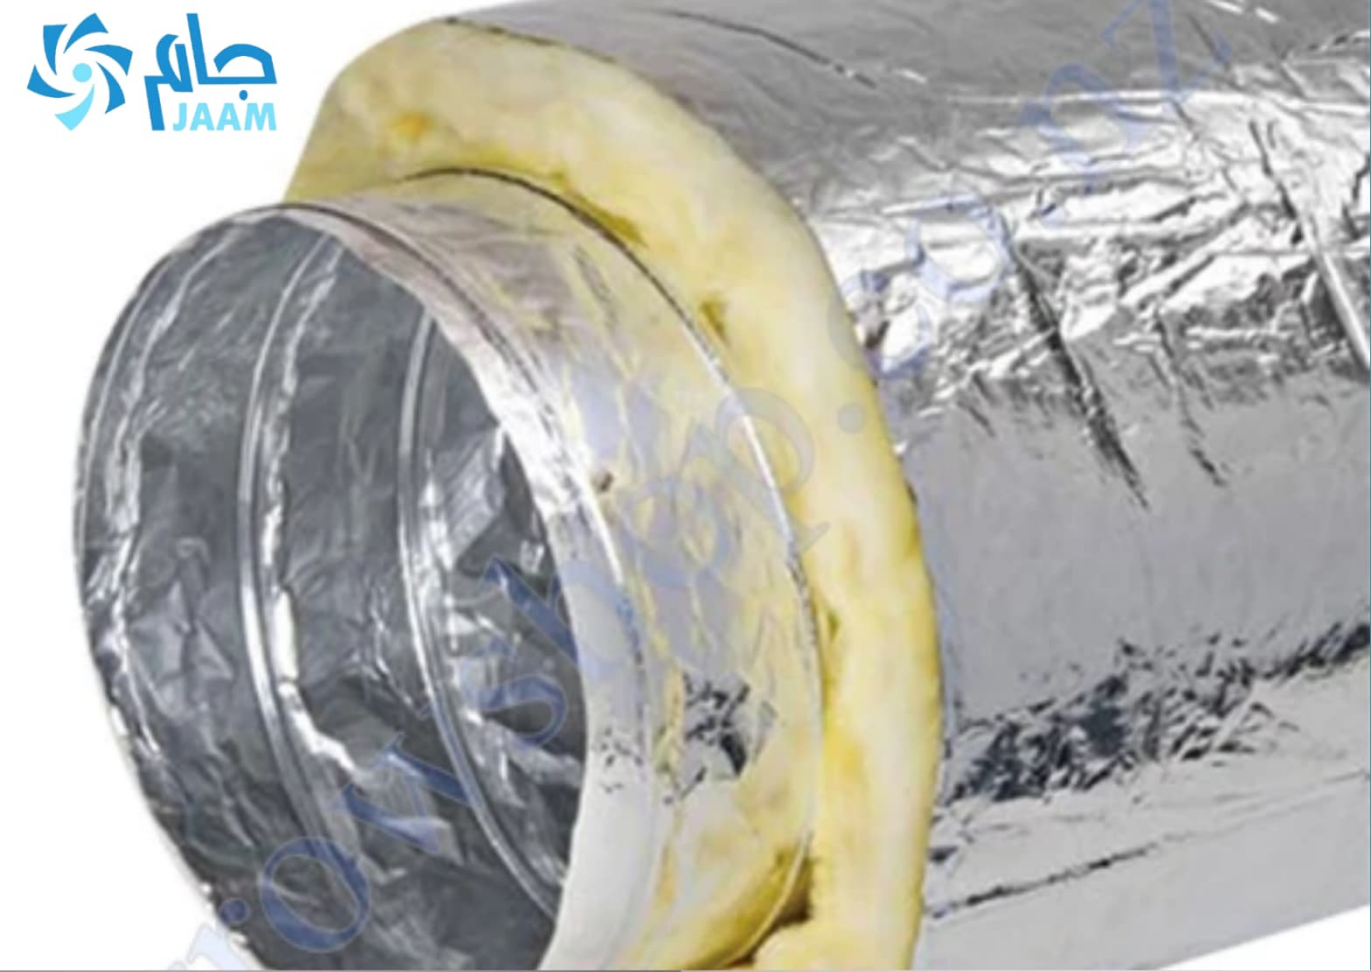

Thickness: 20mm & 30mm

Length: 5mtr

Other sizes be produced according to customer's drawing.

**AVAILABLE

0504613160**

Flexible duct

The double-ply insulated material of this HVAC air duct allows it to function well in temperature ranges between -20°F and 160°F .

Available now with different sizes.

0504613160

Aluminum Duct

Ventilation

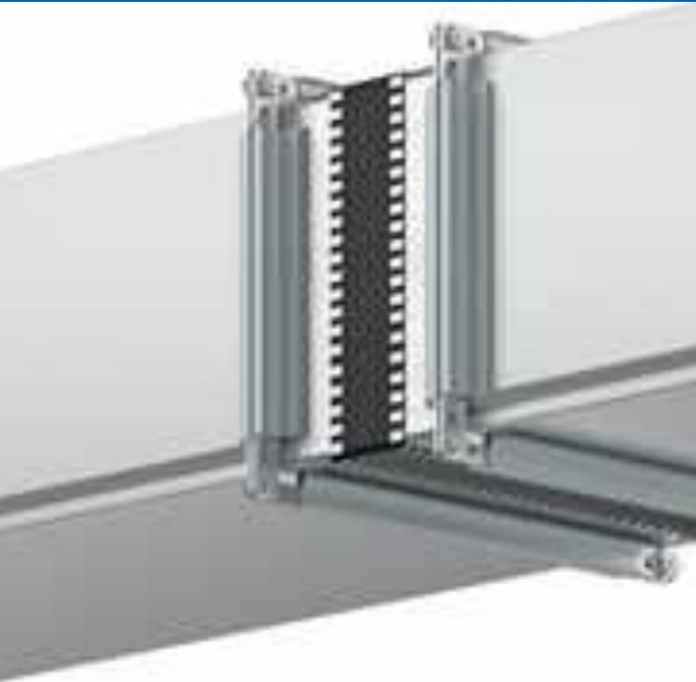

Suitable for high, medium and low pressure applications compared to aluminum foil duct. Can be used for exhaust venting bathroom vents, clothes dryers, range hoods, fireplace etc.

Duct connector

All air duct installations for HVAC systems are attached to mechanical equipment containing a fan or blower. Vibrations are transmitted into the duct which carry the noises throughout the system. an air-tight flexible joint, must be inserted between the equipment and the ductwork.

REFREGRANT 410A

Newer air conditioning models are designed to be used with R-410A for reliable and more efficient operation. Because R-410A can absorb and release more heat than R-22, your air conditioning compressor can run cooler, reducing the risk of compressor burnout due to overheating.

R-410A also functions at a higher pressure than R-22, so new compressors are built to withstand greater stresses, reducing the chance for cracking. If you were to put R-410A refrigerant into a system designed for R-22, the pressure would be too much and the unit would break.

All air conditioners use an oil to keep the compressor lubricated during operation. R-22 air conditioners use mineral oil and R-410A systems use synthetic oil. The synthetic oil is generally more soluble with R-410A than mineral oil is with R-22. This means the R-410A system operates more efficiently reducing wear and tear on the compressor.
