Devotek

Development Technology Company

Your Best Business Developer

We distinguish Ourselves from the market by putting strong emphasis on it security and business continuity thus providing companies with IT resilient systems while maintaining vendor neutrality

MISSION

1. To aid SMB/SOHO with high standard in information technology

2. To help SMB/SOHO achieve Business Continuity/Disaster Recovery Plans SLAs

3. To provide efficient and cost-effective solution that provide IT resilience to SMB

4. To provide public cyber security awareness

VISION

To become the leading IT Business developer of choice for SMB/SOSO when it comes to IT technology , Business Continuity/Disaster Recovery .

Devotek specialize in four main areas :

Telecommunications Solutions

- DIA (Direct Internet Access) .
- IP VPN Connectivity .
- VSAT Connectivity .
- SIP Services (Voice over data) .
- Datacenters Virtualization
- Data cloud services and hosting .

01

Low Currants And CCTV Systems

- Network Infrastructure .
- CCTV Systems .
- IP Telephone Systems .
- Unified WLAN Access Points .
- Long Range Point to Point Wireless Connectivity .

02

Network And Security Solutions

- Web and email Gateway \end point security
- Advanced Threat Protection .
- Vulnerability Assessment
- MSP / Firewalls
- Network Monitoring

03

Information Development Solutions

- ERP/CRM/POS Development .
- Website and applications Development .
- Tracking systems development .
- Call center systems Development ..

Telecommunications Solutions

DIA (Direct Internet Access)

Introduction of DIA

DIA provides enterprises with reliable, secured and dedicated high-speed fixed connectivity to the Internet through different and modern access technologies using fiber optics, microwave ,Vsat and LTE .

a. Fiber Optic (Carrier Grade)

The network infrastructure will serve customer subscribing to this service, utilizing DSP MPLS network and last mile connectivity will be over the Fiber.

b. Microwave (Carrier Grade)

The network infrastructure will serve customer subscribing to this service, utilizing DSP's MPLS network and last mile connectivity will be over Microwave and Microwave as access media

c. Dedicated speed over LTE via Routers

Direct internet access of 1Mbps,to 8Mbps be provided by utilizing LTE network regardless of the location (This Media only from ZAIN) .

c. VSAT Connection (Satellite connection)

The network infrastructure will serve customer subscribing to this service, utilizing V sat network and last mile connectivity will be over the satellite (this solution only for the remote arias) .

Telecommunications Solutions

01

IP-VPN Connectivity

Introduction IP-VPN :

IP VPN is a standard, reliable and flexible connectivity resource that uses the standard internet protocol (IP) and it helps customers to connect two or more sites, buildings or branches through a single virtual private network that enables flexible and continuous data and applications exchange between different users and nodes. IP-VPN can be offered over microwave, Fiber, vsat and best effort LTE.

a. Fiber Optic (Carrier Grade)

The network infrastructure will serve customer subscribing to this service, utilizing DSP MPLS network and last mile connectivity will be over the Fiber.

b. Microwave (Carrier Grade)

The network infrastructure will serve customer subscribing to this service, utilizing DSP's MPLS network and last mile connectivity will be over Microwave and Microwave as access media

c. Dedicated speed over LTE via Routers

IP-VPN of 1Mbps,to 8Mbps or best offered be provided by utilizing LTE network regardless of the location (This Media only from ZAIN) .

d. VSAT Connection (Satellite connection)

The network infrastructure will serve customer subscribing to this service, utilizing V sat network and last mile connectivity will be over the satellite (this solution only for the remote arias) .

Telecommunications Solutions

01

SIP Services (Voice over data)

Introduction SIP Services

SIP Trunk is an IP based voice solution utilizing the SIP standard SIP Trunk enables customers to make secure IP based calls This technology allow companies to have fixed communications for their employees over IP networks It was developed as a cost-effective replacement to the old PSTN trunks and can accommodate more calls in the same physical link It also allows effortless expansion of the capacity, straightforward integration with modern IT networks, and can reduce the cost .

Service Features :

Distribution
Scalability
Remote extensions

- Call quality
- Cost savings
- Redundancy

Technical Features :

- Availability
- Capacity
- Quality
- Security
- Features.

a. SIP Trunk Over connectivity media :

This the usual services you will need receive the service on your PBX using the connectivity medias (Fiber, cobber, microwave, LTE) .

a. SIP Trunk Over cloud :

With this service model you can use your SIP extensions any were using the internet only .

Control Systems

Introduction Control Systems

Our award-winning access control systems extend capabilities, improve operational efficiencies and instill confidence that precious assets, resources and people are secured and protected.

Access control systems features :

- Trusted access, for the right people at the right times
- Safe environments for employees, visitors and contractors
- User convenience and workflow optimization through integrated, mobile solutions
- Increased visibility, with real-time monitoring and cost-control functions
- Investment protection via scalable, forward-looking solutions
- Peace of mind, with expert, personalized concept-to-implementation support

What we are offering :

- Fingerprint Access Gate .
- Fingerprint Attendance system .
- Cards access gate .
- Card's attendance .
- Call system .

- Intercom systems
- Visitor Management System .
- Car Parking Systems.
- Locker Systems .

Low Currants And CCTV Systems

02

CCTV Systems

CCTV business in the right location ...

Our CCTV business camera systems cover analogue, HD analogue and IP cameras providing businesses with the best quality images that can be monitored on a remote PC, smart phone or tablet – choices that are both easy to use and inexpensive.

What we are offering :

- Network Cameras .
- PTZ Cameras .
- Turbo HD Cameras .
- Security thermal cameras .
- Thermography thermal cameras .

- Commercial Displays .
- Monitors .
- DVR Devices .
- Network Video Recorders .
- Traffic Flow Systems

- Traffic Cameras .
- Parking Guidance
- Checkpoint Systems .
- Entrance & Exit Management .
- Smart Surveillance Systems .

CCTV Installation

A nationwide network - ready to help you quickly and effectively

Repairs & Maintenance

Any repairs and maintenance can be handled by our technicians

Network And Security Solutions

Introduction Network Infrastructure

Enhanced efficiency, increased productivity are actual results of a designed and well-preserved communication network. At Devotek, we provide business and individual sectors with computer network infrastructure design to get exemplary performance and continuity, creating a primary change in the way your computer system operates.

On top of that, our innovative solutions help our clients in expanding the value of the current network infrastructure by pinpointing opportunities and risks, analyzing network approaches, and the ideal network services to maximize their business.

Switching Solutions

The switches deliver highly secure, reliable, and transparent solutions for networks of all sizes.

Routing Solutions

The routing solutions deliver next-generation services that help boost productivity, meet business needs, and reduce operating costs.

Structured Cabling

If you find yourself spending a lot of time sorting a disorganized and tangled cabling structure, you could probably benefit from structured cabling services.

Wireless Solutions

The wireless solutions deliver designed to support high-density environments.

Managed IT Services

Round-the-clock technology optimization and monitoring

When your technology infrastructure isn't performing at its best, not only are you not making the most out of your IT investment but you're also not working as efficiently as you could be. All this translates into downtime and profit lost, so isn't it time you work with confidence and make sure your technology supports your business objectives?

Why the managed it services from Devotek :

Managed IT Services from Devotek lets you leverage proactive monitoring and maintenance of your IT infrastructure, meaning we'll make sure everything is always running seamlessly, no exception.

- **Eliminate costly repairs** - proactive monitoring and maintenance of your systems for a flat monthly fee means you'll be able to stop spending money on rectifying big disasters after they've happened
- **Say goodbye downtime, hello improved performance!** - and of course, when we're looking after your systems in real time, you'll experience far fewer problems and virtually no downtime
- **Enjoy your very own IT department** - without the high costs associated with hiring, training and employing staff
- **Gain rapid remote support** - remote access allows us to repair most issues without having to disrupt you onsite
- **Get a predictable flat monthly fee** - plan your IT budget with a far higher degree of accuracy
- **Sleep easier at night** - you have enough to worry about which is why you should let us take the weight of IT and network hassles off your shoulders
- **Benefit from enhanced security** - we'll help you design a backup disaster and recovery plan so that you can maintain operations no matter what comes your way
- Point you in the right direction - our consultants can help you implement the right strategies as well as coordinate with vendors for you

"Our technicians take the time to learn about your business in order to design customized solutions that will work best for you and you are only. Best of all, we offer this for a flat monthly fee that is cheaper than hiring your own in-house IT personnel."

Network And Security Solutions

ERP Systems

Introduction ERP Systems

There are very few tools and software services designed for LE or SME We regularly deal with companies with 20-30 office workers, workers who use computers all day every day, who are trying to transition to enterprise management tools, and finding they do not have an enterprise IT department to tackle these enormous tasks.

CRM SYSTEMS

Transitioning from managing sales interactions on paper or Excel to a true "Customer Relationship Management" (CRM) system can sink a business.

ERP SYSTEMS

Transitioning from Peach Tree or QuickBooks to a true "Enterprise Resource Planning" (ERP) system can sink a business.

POS SYSTEMS

Converting to digital Point of Sale systems or taking on a huge volume of web sales without adequate infrastructure can sink a business.

ERP, CRM, POS Integration

We can help, and not just with implementing and testing the technical details of these systems, but with planning and integrating. Planning how to integrate and test a CRM is more important than integrating a CRM. A CRM that goes poorly can cripple a sales staff with lack of training and confusion. A CRM that is poorly planned will not integrate with other tools after completion, leaving Sales staff with a new tool that is worthless because it does not work with the rest of the company.
